

# Law of Cosines: Question 1

Ana Bhattacharjee

September 12, 2019

To find  $b$ , we must use the law of cosines.

$$b^2 = 16^2 + 11^2 - 2(16 * 11 * \cos(33^\circ)) \quad (1)$$

$$b^2 = 256 + 121 - 2(172\cos(33)) \quad (2)$$

$$b = \sqrt{377 - 344\cos(33)} \approx 9.04 \quad (3)$$
